

Deepak Saud

Software Developer

Engineering graduate with a keen interest in technology. I have always been intrigued by the modern and innovative advancement of IT industry, so I wanted to be a part of this industry and contribute my best work to the community. Also, I am a constant learner and I can quickly adapt to the latest version of the technology.

Express.js

MySQL

MongoDB

Git & Github

Restful API

PERSONAL PROJECTS

CatchUp (Chat-Application)

- Build a social media chat application to interact with close circle of family, friends and relatives.
- It was built using the Chat Engine API with CRUD functionality.

ListItUp (To-do list)

- Created a node.js application with CRUD to make a list of tasks for future references.
- Once you add a task, it gets stored in the MongoDB database and once you have done that task, it gets deleted once you mark done.

BeatTheMusic(Online Music Instrument)

- It is basically a web application consisting of different musical instruments to play with different sounds.
- It gives the experience of musical setup & fun platform to practice musical instruments.
